**To Study The Mode of Attachment of Monogenean Fish Parasite of The Genus *Bychowskyella* Archmerow, 1952 In The Fishes Of River Gomti.**

**Dr Kusum dayal**

Maharishi university of information technology , Lucknow.

The aim of this study was to investigate the mode of attachment of the genus *Bychowskyella* Archmerow, 1952 on the gills of fish host. The host is collected from river Gomti from lucknow India. It was found that parasite attach itself on the gill at the distal end. And attaches itself in between two gill lamellae by its special rhomboidal haptor. An effort has been also done to study that their attachment also causes mechanical injuries to the fish .
